Professional Summary

Software Engineer with 1.5 years of experience in **Python development** and **automation** focused on system reliability, with experience supporting **machine learning** workflows, CI/CD integration and building scalable backend systems with RESTful APIs. Holds hands-on experience across media supply chain services at **Warner Bros. Discovery** and **Mirafr Software Technologies**, and as an intern at **Bosch India Ltd.** Certified in **Data Science** and experienced in Agile methodologies. Seeking to contribute expertise in a challenging and growth-focused technical role.

Education

Bachelor of Engineering (BE) – Computer Science and Engineering, DR Ambedkar Institute of Technology, Bengaluru (July 2024)

- CGPA: 8.33 | First-class with distinction

Pre-University Course (PUC) – PCME, KLE Independent PU College, Bengaluru (March 2020)

- Percentage: 82.8%

Technical Skills

- **Languages:** Python (Primary), Java, JavaScript, SQL
- **Backend & APIs:** FastAPI, Flask, REST, JWT, OAuth2
- **Testing & Automation:** Pytest, Playwright, CI/CD, GitHub Actions
- **Databases:** PostgreSQL, MySQL, MongoDB, Redis
- **Cloud & DevOps:** AWS, Docker
- **ML & LLM:** PyTorch, scikit-learn, Transformers, MLflow

Professional Experience

Software Engineer in Test – I, Warner Bros. Discovery, Bengaluru | Sept 2025 – Present

- Developed lightweight test APIs and mock services to simulate backend dependencies and enable reliable end-to-end and integration testing of RESTful workflows.
- Worked on Python-based UI and API automation using Playwright and pytest, improving regression coverage ~35% and reducing manual validation effort by ~40%.
- Served as primary automation owner for the **Distribution & Planning microservice within the media supply chain**, managing test strategy, regression pipelines, defect triaging, and release validation across cross-functional teams

Software Engineer – I, Mirafr Software Technologies Pvt Ltd, Bengaluru | Dec 2024 – Sept 2025

- Gained hands-on experience in Python backend development and machine learning integration within an agile environment.

- Contributed to the design and deployment of RESTful APIs using FastAPI for ML-powered applications.
- Built and integrated a rubric-based evaluation system using CodeT5 (LLM) to assess candidate performance.

Python Full Stack Intern, Bosch, Bidadi, India | 1 Month

- Gained hands-on exposure to full stack development using Python Flask in a collaborative team setting.
- Assisted in identifying and resolving bugs in existing web applications to improve overall stability.
- Participated in code reviews, documentation updates, and knowledge-sharing sessions during development cycles.

Projects

Jira Automation Tool for Test Case Generation (Hackathon – Warner Bros. Discovery)

Developed an internal Python tool to automate the conversion of Jira requirements into parameterized Pytest test cases, reducing manual test design effort by ~50% and improving requirement-to-test traceability across 5 services

Role & Contribution:

- Built Jira REST API-based parsing logic to extract requirement metadata and generate parameterized Pytest test scenarios using rule-based mappings.
- Integrated a cursor-driven background agent to detect incremental Jira updates and automatically generate and commit test scripts to service repositories with CI validation via pull requests.

LLM-Based Evaluation System for Candidate Scoring (Internal Tool – Mirafra)

This project aimed to automate candidate evaluation using a rubric-based scoring system powered by a large language model (CodeT5). The system was designed to assess code submissions, assign rubric-based scores, and provide intelligent hints, streamlining the evaluation process for technical assessments.

Role & Contribution:

- Designed RESTful APIs for backend evaluation system
- Created rubric schema for structured code assessment
- Deployed services and integrated into internal platform

Certifications

- Post Graduate Diploma in Data Science, Artificial Intelligence & Machine Learning (Python) | July 2024 – Dec 2024
- AWS Technical Essentials – Infosys
- Java SE8 – Infosys
- SQL – HackerRank
- ReactJS – Infosys
